ARVINDER MUNDRA

College Station, TX | +1 (469) 901-4011 | arvinder.mundra@tamu.edu | LinkedIn

Data Science graduate student with professional experience as a Software Engineer and Business Intelligence Intern, specializing in data analytics, ETL pipelines, cloud-based data platforms, and machine learning. Proven experience using Python, SQL, Power BI, and Google Cloud Platform to build scalable data models, automate reporting, and deliver insights for business and financial decision-making.

EDUCATION

Texas A&M University, College Station — **Aug 2025 - Dec 2026**
Master of Science, Data Science (GPA: 3.75/4.0) — *College Station, Texas, USA*

SRM Institute of Science and Technology — **Jun 2019 - Jun 2023**
Bachelor of Technology, Electronics & Computer Engineering (GPA: 3.61/4.0) — *Chennai, India*

WORK EXPERIENCE

Dun & Bradstreet | *Software Engineer* — **Aug 2023 - Jul 2025**

- Led performance and functional enhancements across SPCA (Subscriber Provisioning Contract Admin) and Finance Analytics platforms by optimizing MySQL queries, backend data pipelines, and microservices workflows, improving scalability and ensuring reliable access to high-volume operational and financial datasets.
- Built real-time monitoring dashboards and implemented Service Level Indicators (SLIs) within cloud-based microservices on Google Cloud Platform (GCP), enabling automated alerting, faster incident resolution, and improved system reliability for analytics-driven decision-making.
- Conducted financial data analysis to refine credit scoring and risk profiling logic, collaborating with product owners, architects, and QA teams to translate evolving business requirements into scalable, production-ready data solutions aligned with strategic roadmaps.

Call Health Services Pvt. Ltd. | *Business Intelligence Intern* — **Mar 2023 - Apr 2023**

- Conducted RFM (Recency, Frequency, Monetary) analysis and customer retention modeling using Python and Advanced Excel, identifying high-value customer segments to support data-driven marketing and revenue optimization strategies.
- Developed interactive Power BI dashboards by integrating and transforming SQL-based datasets, enabling real-time KPI tracking, trend analysis, and executive-level reporting to improve operational decision-making.
- Automated data ingestion pipelines using RESTful APIs and applied MedSpaCy NLP techniques for clinical named entity recognition, improving structured data extraction, reducing manual processing time, and enhancing analytics readiness for healthcare datasets.

My Equation | *Executive Lead, AI-ML Team* — **Jul 2021 - Mar 2022**

- Led end-to-end development and deployment of AI/ML solutions for STEM-focused applications, designing batch and real-time algorithms with structured workflows for data preprocessing, model training, validation, A/B testing, and performance monitoring, improving model accuracy and production reliability.
- Built scalable data pipelines and ML frameworks using Python, TensorFlow, and Django, streamlining dataset preparation and deployment processes while optimizing system performance through automated testing and monitoring.
- Directed cross-functional coordination across 13+ technical tracks and delivered applied training on regression modeling, neural networks, object detection (YOLOv5), and NLP techniques (BERT), translating complex analytical concepts into practical implementations and driving engagement across 1,200+ learners.

TECHNICAL SKILLS

- **Programming & Scripting:** Python, R, SQL, Java, C++, C, JavaScript, Shell scripting, HTML, CSS
- **Data & Analytics:** Machine Learning, Statistical Modeling, ETL, Data Pipelines, Data Visualization, Exploratory Data Analysis (EDA), Data Modeling, Analytical Thinking
- **Tools & Platforms:** Power BI, Jupyter Notebook, RStudio, GitHub, Postman, Eclipse, Google Colab, OpenAI, Microsoft Excel
- **Libraries/Frameworks:** React, Angular, Spring Boot, NumPy, Scikit-Learn, PyTorch, TensorFlow
- **Cloud Platforms & Databases:** Google Cloud Platform (GCP), AWS, Microsoft Azure, MySQL, MongoDB, PostgreSQL, Oracle SQL

PROJECTS

Classification of Carotid Artery using Ultrasound Imagery with Deep Learning

- Built an end-to-end pipeline from labeled frame curation and standardized preprocessing to training a transfer-learned CNN (Inception-ResNet-v2) with patient-level validation splits.
- Reported accuracy and class-level sensitivity/specificity with focused error analysis, documenting assumptions and steps for reproducibility.
- Delivered a workflow that clinicians and researchers could review, extend, and benchmark against future models.

Supermarket Management System

- Designed a relational schema and built triggers, stored procedures, and UDFs in SQL/PLSQL to keep inventory, customer, and sales data consistent and analytics ready.
- Automated routine operations and created summaries/views to speed up recurring queries, improving transactional efficiency, and the reliability of category-level reports.
- Produced descriptive insights on sales and inventory patterns that informed pricing, assortment, and engagement decisions.

Time-Series EDA & Baselines on Equity Prices:

- Prepared historical price data with cleaning, normalization, and feature construction, then fit simple regression baselines to establish error bounds and context for trends and seasonality.
- Highlighted trends, volatility windows, and regime shift with transparent evaluation, prioritizing interpretation over trading claims.
- Created a plain-language, metric-driven foundation for more robust time-series modeling and partner-facing reporting.

LEADERSHIP & ACHIEVEMENTS

- **Event Coordinator, CSR(D&B):**Organized three community projects-wall painting (10 murals, 60+ volunteers), school bag drive (110+ bags), and tree plantation (150+ saplings) managing logistics, teams, and delivery on schedule.
- **Workshop Mentor:**Mentored 400+ participants over 14 days on applied ML/AI, delivering live instruction, project guidance, and technical support.
- **Research Publication:**Co-authored "Classification of Carotid Artery Intima-Media Thickness Ultrasound Images Using Deep Learning," presented at ICIOT 2023.
